MEMORANDUM

DATE: March 4, 1988

SUBJ: Coosa River Site, Expanded Site Investigation

FROM: Drew Peake, PE

THRU: Jim Greenfield, Regional Wasteload Allocation Coordinator
John Marlar, Chief, Facilities Performance Branch

TO: Felecia Barnett, Waste Management Division

We have reviewed the Draft Study Plan for the Expanded Site Investigation of the Coosa River Site at Rome, GA and offer the following comment. Water quality impacts can be modelled if the following additional data is collected:

- ° Water and sediment data at
 - Two (2) stations in Lake Weiss
 - Four (4) stations between the Wastewater Treatment Facility and the state line.
- ° Fish sampling at
 - The state line
 - Lake Weiss.

Please modify the study plan to include collection of these data. Water quality modelling should enhance your EPA Hazard Ranking System (HRS) documentation package.
